DEMO-4: Tagging an Image

Note: All commands are executed as root.

1. To tag an image while building the image from Dockerfile use the -t flag

```
$ docker build . -t <username>/<imageName>:<tagName>
```

2. To tag an existing image use the tag command

```
$ docker tag <imageID> <username>/<imageName>:<tagName>
```

```
root@docker-1:~/dockDemo# docker tag 7d5435a627e7 edureka/myimage
root@docker-1:~/dockDemo# docker images
REPOSITORY          TAG              IMAGE ID            CREATED             SIZE
edureka/myimage     latest           7d5435a627e7        54 minutes ago      189MB
